

Air Rifles, Pistols and Accessories

You and Air Arms, a winning combination.

We put you... first

Product superiority comes from commitment to excellence. At Air Arms, that commitment begins with our production technology and is applied to everything we do, by the skill of our staff. Through research, design, development and production, the Air Arms philosophy of 'only the finest' is maintained and constantly challenged by our quality control. We're the best because that position was the only one acceptable, and we know our customers share that stance. We will continue to be the best, because our products constantly evolve to meet the demands of our customers, and as we already know, only the best will do for them. Air Arms. We put you ... first.

Welcome to Air Arms

When you read this brochure, the quality of the products within it show you where Air Arms are today. We are a modern, progressive company that maintains its position through investment in technology and people but we have a history and a heritage of which we are extremely proud. We know that cutting edge technology and traditional gun making skills can be combined successfully because we've built our reputation on it.

Today the company produces sporting air rifles that set the hunting standard and competition rifles that win world championships, all supplied through a network of distributors. As goals are achieved and new milestones passed, Air Arms retains the drive and standards of its founder, Bob Nicholls. Those who now take his company forward do so on a foundation of the principles pioneered and in a changing world, that's one thing that will always remain. Air Arms are the best because the finest airguns carry its name and proof of this is on every page of this brochure.

So, welcome to Air Arms -
where your shooting dreams become a reality.

Our World Champions

Limited Editions

Every now and then Air Arms like to produce a rifle that is truly unique. It gives us the opportunity to recognise a very special occasion and allows us to show off our engineering prowess.

In 2012 we celebrated the TX200's 21 years in manufacture. Whilst the rifle has changed and improved over the years, the rifle fundamentally remains the same. To mark this very special birthday only three very limited edition models were produced. The first is kept in the Air Arms vault, the second was sent across to the USA and the third kept here in the UK and put up for raffle. The winner was drawn in July 2012. Air Arms raised a staggering £5,000 for the charity Help for Heroes.

2013 saw Air Arms mark their 30th birthday with a very special and limited run of the S510. 350 rifles were produced and sold worldwide, with over 50% staying here in the UK. The rifle included a bespoke ambidextrous, high grade walnut stock with a rosewood fore end, nickel plated machined parts and an aluminium presentation case including a badge and commemorative plaque.

In September 2016, the RSN70 was show-cased at the Midland Game Fair in memory of our founder, Bob Nicholls, to mark what would have been his 70th birthday. Based on the HFT500, this particular rifle is truly unique and nothing of its like has ever gone before. Drawing inspiration from Bob's favourite car, a Bentley Continental GTC, the rifle features accents of the vehicle including the original Umbrian Red paint colour and Magnolia leather. Only 70 of these exquisite rifles were made making it an unmistakable, timeless and collectable piece.

Galahad

When Air Arms decided to enter the bullpup market, we took the approach that bullpups did not have to lose the appealing look of a traditional sporting rifle. With smooth lines and flowing curves the Galahad fits perfectly with the current family of Air Arms rifles. That is not to say the benefits of a bullpup rifle have been overlooked. The length of the carbine version is less than 700mm with a centre of gravity positioned just above the trigger, making for a beautifully balanced shooting experience. The Galahad is a step away from the normal bullpup experience and a leap into excellence.

The Galahad is a fully ambidextrous airgun with the cocking lever being interchangeable between the left or right hand side of the action. The forward mounting cocking lever means the shooter never has to remove their trigger hand from the pistol grip. Along with this feature are options that include two calibres, and two stock options, so the shooter can tailor the Galahad to their personal requirements. A true sporting rifle, the Galahad fulfils the role of a compact hunter whilst not losing sight of its traditional heritage.

Specification

- Weight: Starting at 3.6kg (7.93lbs)
- Length: 698mm (27.5")
- Power: 4.5mm (.177) - 16J (12ftlb)
5.5mm (.22) - 16J (12ftlb)
- Shot count: 4.5mm (.177) - 110
5.5mm (.22) - 120
- Compact ergonomic design
- Unique forward motion cocking lever
- Fully regulated action
- Adjustable 2 stage trigger

- Threaded shroud for optional moderator
- Built-in level
- Adjustable butt pad
- Available in Walnut or Black soft touch
- Supplied with two 10 shot magazines

For full specification see technical page at the back of the brochure

Galahad HP

Choosing a high power hunting rifle has been mainly a choice between a full length, long rifle or a military or futuristic looking bullpup... until now. The Air Arms Galahad brings traditional elegance and beautiful crafting to the world of bullpup shooting. The Galahad offers all the advantages of a bullpup rifle but demonstrates that styling and ergonomics do not have to be compromised. The ambidextrous stock and cheek piece fit perfectly to the shooter and offer both stability and comfort, making shooting this rifle a pleasurable experience normally associated only with full size rifles.

One benefit of a compact hunter like the Galahad is its size and manoeuvrability but power output also plays an important factor. Despite its size the Galahad packs an effective punch of up to 30 ftlb (41 joules) in .22 cal (5.5mm) returning over 55 shots per charge from the regulated rifle length model. This performance makes it a formidable tool for longer ranges. The high power range also includes adjustable power for the versatility of shooting at close quarters e.g farmyards and barns or, alternatively, in open fields and ranges.

Bringing traditional elegance and beautiful crafting to the world of bullpups

Specification

• Weight:	Starting at 3.6kg (7.93lbs)
• Length:	Carbine: 698mm (27.5") Rifle: 798mm (31.4")

S410

The Air Arms S410 is the classic, precharged pneumatic sporter and regarded throughout the airgun world as the finest in its class. Like every Air Arms rifle, the S410 owes its performance to the company's policy of continual development, which keeps this bolt-action 10-shot, perfectly balanced hunting rifle right at the top of the sporting league. Correct design, precision engineering and a deserved reputation for customer satisfaction, makes the Air Arms S410 the first choice for airgun hunters the world over.

The Air Arms S410 is a working combination of clinical accuracy, reliability and classic styling. Within its bolt-action, multi-shot format you'll discover a truly satisfying degree of user-friendly performance, which will take your hunting wherever you want it to go. The rifle's internal valving system has been refined to produce consistent, full-power shooting, throughout the hunting year and the S410's match quality, Lothar Walther barrel is your absolute guarantee of accuracy. Time and again our team of field testers and customers have recorded genuine, one-hole groups with their S410s and at ranges far beyond their hunting needs. This rifle runs a precision, removable, 10-shot magazine system developed in-house by Air Arms technicians and made to perform perfectly with the S410 action. Simple to use and containing no fragile clockwork mechanisms, the S410's magazine ensures that each pellet is loaded perfectly, every time. This S410's action is held within a beautifully crafted Minelli stock, purposefully designed to guide you to the success you deserve. Ask anyone who owns an Air Arms S410 and they'll tell you why this rifle fully merits its status as one of the most popular air-powered sporters in the world.

Where classic style meets total hunting performance

S400

The Air Arms S400 is the most popular top class, single-shot, precharged pneumatic sporter of them all and for a host of good reasons. Developed and built with the same care and precision as its 10-shot stablemate, the S400 is as comfortable in the hunting field as it is on the Hunter Field Target course. Here's a perfectly balanced sporter for those who want the best, in a proven, uncomplicated format. From its clean good looks to that renowned, rock-solid performance, the Air Arms S400 really could be the rifle you've been waiting for.

The Air Arms S400 is a rifle with nothing to prove. Throughout its development and evolution, this stylish sporter has won silverware and acclaim from hunters around the world. At the heart of the S400 is a full-power, consistent action, which feeds a match quality Lothar Walther barrel developed to Air Arms' specification. Each pellet is loaded by hand via a generous, bolt-action breech and the comfortable bolt handle makes cocking and loading the rifle fast, secure and easy. Charging the S400 is equally effort-free thanks to its clip-on, self-sealing connector and like all Air Arms precharged pneumatics, the S400's internal components are protected from dirt and grit by an inbuilt bronze air filter. The S400's performance package is completed in the finest possible way, by stylish woodwork produced by the highly acclaimed Minelli Group, an adjustable, two-stage trigger with a cross-lock safety catch, an on-board pressure gauge - and the approval of thousands upon thousands of satisfied airgunners.

Single-shot precision, a best-selling sporter

Specification

- Weight: Starting at 2.6kg (5.7lbs)
- Length: Carbine - 925mm (36.5")

S510

The Air Arms S510 takes the proven 400 series format and gives it a new level of sophistication. This rifle's smooth, virtually effortless, sidelever action cycles each pellet with a flex of the wrist. Those pellets will, once released by the rifle's precision trigger, exit the muzzle with a reduced report courtesy of the S510's fully shrouded barrel. Every performance feature of the world-beating 400 series has been incorporated here, plus a degree of elegance you'll only find with an Air Arms S510.

This refined sporter is all about quiet precision. With its sidelever cocking and loading system effortlessly presenting each pellet to the barrel, it's easy to cycle the S510's action without even taking your eye from the scope. Shooting straight has never been easier or more satisfying. Accuracy is the foundation of all Air Arms rifles and the S510 maintains our standards impeccably. Expect impressively tight groups at all realistic hunting ranges, with plenty of potential in reserve. Inside the S510 its balanced firing valve metres the power, promoting the consistency so vital for accurate and totally dependable shooting. On the outside, the stock uses ergonomics to the full and maintains the effect of shooting the S510, by guiding your aim and your shots with easy efficiency. Hand built and finished in a combination of hi-gloss and semi-matt metalwork, this is a sporter designed to produce the best – from itself and its owner.

An effortless action with stealth as standard

Specification

- Weight: Starting at 2.9kg (6.4lbs)

Superlite

The Superlite series was created for shooters who want a full-power, maximum accuracy sporting rifle in a lighter format. The Superlite series certainly gives that and everything else required for you to achieve your full potential. Air Arms know that true shooting performance can only be realised if full control comes with it and the Superlite design brief was built around this fact. With the Superlite series, the only thing lost is the weight you don't want. If lighter rifles are what you're looking for, 'weight' no more - the Superlite is here.

When our customers ask for something, we always do our best to provide it. More and more hunters are seeking lighter rifles these days and that's why Air Arms commissioned the Superlite series. From the outset, our technicians worked to a strict design brief which stated, 'Performance first - reduce weight where possible.' That brief led us to the creation of these highly portable, fast handling, full specification sporters in their lightweight, ambidextrous stocks and a range of rifles that have exceeded even our expectations. Two stock configurations are available for the 400 and 500 series rifles and two for the TC series, with all of them presented in a highly acclaimed Minelli stock, produced from poplar wood, they are a fully checkered, ambidextrous design, in a choice of finishes. Superlites are supplied in our S400 and S500 series actions, including the TC and XS models, offering a lighter touch across a wider range.

Maximum performance, in a lightweight package

Specification

- All S400, S410, S500 & S510 models in the Air-Arms range are produced in a Superlite format
- Ergonomically design ambidextrous stock with beautiful flowing lines
- Made from lightweight poplar wood
- Starting weight of 2.6kg (5.7lbs) for the S400 carbine up to 2.9kg (6.4lbs) for the S510 Extra
- Two options available: Traditional Brown Hunter Green

- Ventilated butt pad
- Built-in manometer
- In-line 20 micron filter

S510 XS

There are many hunting situations where you'll need extra performance and many more where a .22 rimfire is 'too much gun'. Here's where the S510 XS fully regulated rifle proves to be the perfect hunting partner. With over 30ftlb in .22 at your disposal, you choose the power you need at the turn of a dial. Never before has a precharged pneumatic sporter provided such versatility in such an easy-to-manage package. The S510 XS comes with autoload, multi-shot capability as standard and it is activated by a sidelever system that makes cocking and loading virtually effortless. This stylish sporter equips you with extended performance and is designed to take your hunting further than you ever thought possible.

The owner of an S510 XS gets the full range of Air Arms performance developments, presented in the company's trademark combination of elegant stock and sleek action. Within that action, an enhanced fully regulated firing system delivers high power and full hunting standard accuracy. The match grade barrel is fully shrouded and includes integral baffles which effectively reduce the discharge noise and its threaded muzzle is designed to accept an optional moderator (country dependant). As with all Air Arms rifles, a precision, adjustable, two-stage trigger comes as standard aiding the rifles inbuilt, match standard accuracy. Add a stock designed for the fast, secure, consistent handling a quality sporter needs, and the potential of the rifle is obvious. The action block incorporates a power adjuster, which can instantly set the S510 XS to produce anything from 7 ftlb right up to 32 ftlb in .22 calibre. With this degree of style, performance and versatility at your fingertips, you'll surely understand what the 'XS' really means in the hunting field.

When you need more power, perfectly delivered

S500 XS

Hunters are individuals; some demand the ultimate in hi-tech, while others prefer a more simple approach. In the S500 XS, you have a sporter that offers the best of both worlds. With its variable power and fully regulated action, this rifle provides all the versatility of its 10 shot stablemate, with the straightforward, direct loading of a single-shot sporter. Simply cock the rifle with a short sweep of its sidelever, then roll a pellet into the generous loading channel, before closing the lever, sealing the breech and making the S500 XS ready to fire. It really is that easy and with such a high level of accuracy on offer – the best is definitely yet to come.

A high-power air rifle adds an extra dimension to your sport and allows you to explore and exploit far more potential hunting situations. However, no matter what the power at your disposal, when hunting with an air rifle the requirement for clinical accuracy is universal and that's why the S500 XS has been designed to shoot as straight as a match gun and hit as hard as a sporter – plus that bit extra. The internal components of this rifle are guarded from contamination by a bronze particle filter and regular maintenance is minimal. Therefore, running the S500 XS is every bit as easy as shooting it. Fully equipped with exactly the same proven performance advantages as the S510 XS, this single-shot version has all the power and precision you require. Choose either a thumbhole or a sporter stock to suit your preferred shooting style, fit your scope, and see for yourself just how far an Air Arms S500 XS can take your hunting ambitions.

S510TC

There are two main methods by which the available shot count of a precharged pneumatic air rifle can be significantly increased. The usual method is to fit a large capacity buddy-bottle, but Air Arms wanted to find a more streamlined solution, and so the TC was developed. 'TC' stands for 'Twin Cylinders' and it's these that provide so much more firepower. This benefit is an obvious one, but it brought with it an unexpected bonus in terms of handling. The balance of the TC is as unique as its design and once you've used an S510TC, you'll understand why Air Arms' solution is such an effective one.

To appreciate the S510TC fully, you have to pick it up, put it to your shoulder and hit targets with it. When you discover how well this sporter handles and how quickly it locks on to the point of aim, you can then consider everything else it has to offer. That smooth, minimal-effort sidelever action can cock and load the rifle in under a second, while your choice of coloured stock and the rifle's two stage adjustable trigger provide the control you need to place every shot exactly where you want it. Those twin air cylinders have been designed and built from the finest alloys available, exclusively for the S510TC. The TC also incorporates the advantage of new air-flow technology and materials normally used within the aerospace industry. The development of this striking sporter began with a quest for extra shot capacity and ended with the production of something truly special. The final, undeniable, fact is, nothing looks, handles or shoots like an Air Arms S510TC.

More shots, unique balance and style

Specification

- Weight: Starting at 3.3kg (7.2lbs)
- Power: 16J (12ftlb)
- Side by side twin cylinder action

S510TC Xtra

With its full-length twin reservoirs, the Air Arms S510TC Xtra gives you maximum air capacity and high power in a truly impressive package. Here, in one rifle, is everything that has made the S510 and the TC such purposeful, practical hunting guns. That slick, sidelever action, teamed with the Xtra's power-adjustable facility, with its potent stopping power guided by our specially commissioned, match quality Lothar Walther barrel, means you get more of what you need, exactly where and when you need it – every time.

Sometimes a hunter just needs more. More power, more shots and more capability to do the job. The Air Arms S510TC Xtra gives you just that, from a sporting rifle like no other. Slot in the tried and tested 10-shot magazine, close the sidelever and you're seconds away from knowing why the S510TC Xtra is the company's flagship high-power sporter. Those full-length, specially developed, twin air reservoirs double your firepower and they do so without the weight penalty of conventional designs. In fact, in addition to supplying more air to the powerplant without the need of a buddy bottle, the TC's reservoirs impart balance and on-aim stability to the rifle, adding yet another 'extra' to the high-power performance of this unique sporter. The S510TC Xtra is a rifle for those who need more of everything that makes a high-powered air rifle the perfect tool for the job.

This time, more really is more

Ultimate Sporter R

Air Arms has an unrivalled heritage of producing match winning field target rifles and world class sporters, and it was inevitable that the finest aspects of these superior airguns would meet in the creation of something extremely special. The result is the S510 Ultimate Sporter R, a rifle designed to give hunters the advantages that make Air Arms' FT shooters the best in the world. First, there's the proven S510 technology in a recoilless, precharged pneumatic, 10-shot action, with near-effortless, sidelever cocking and loading. Add a precision regulator to give unparalleled power and consistency, an adjustable, two-stage trigger, a match-accurate, fully-shrouded barrel tipped with a calibre-specific moderator, the renowned Air Arms autoload system that lines up your next shot at the flick of the sidelever and the Ultimate Sporter R can't fail to impress any hunter who demands the best. Now with a choice of three ambidextrous stock options, complete with fully-adjustable cheekpiece, sliding butt pad, integral accessory rail and sling swivel studs, and you're holding a hunting rifle that puts you in total charge of every shot. You're holding the S510 Ultimate Sporter R – a rifle that truly lives up to its name.

Every Air Arms' airgun is built to produce a degree of down range accuracy that makes the most of its owner's skill and marksmanship. Our regulated actions are designed to deliver reliable, superior performance, and our stocks are crafted to complement their actions and help shooters put every shot on target. The S510 Ultimate Sporter R takes this essential relationship to the next level. With a choice of Walnut, Laminate and Black soft touch stock options, the S510 Ultimate Sporter R gives the hunter a degree of control never before available to sporting airgunners. Quite simply, this brings the shooter closer to the full potential of the rifle – and that's a major advantage.

S510 TDR

The Air Arms S510 TDR is described perfectly by its name. First, it's an S510, then it's a Take-Down Rifle and that order of priority is deliberate and essential. The TDR is a full-specification S510 hunting rifle and it's fitted with every feature that makes this rifle a worldwide best-seller. The difference being, the TDR is an S510 that can be taken apart in seconds and packed into its sturdy foam lined hard case. The TDR packs down with its scope and moderator fixed, so it stays in perfect zero, ready to be assembled in less than 20 seconds to provide that renowned S510 performance. The TDR's foam lined hard case has enough room for a tin of pellets, filling connector and allen keys allowing anyone to take it anywhere. A truly effective sporter.

This is a hunting rifle with everything you need and nothing you don't. The S510 TDR is built around the chassis of a rifle renowned for its qualities as a hunter. No performance feature is reduced and nothing is compromised to turn the S510 into a takedown rifle. Right from the first design brief meeting, it was decided that the only acceptable standard was that of the S510 itself and everything followed that brief. What emerged from the development process was a two-piece sporter with a Q-Tec moderator (country dependant), which stowed securely inside its custom fitted, foam lined hard case. Assembling the TDR's action consists of simply locating the butt section into the rear of the action then fixing it via the knurled thumbwheel. Until the rifle is fully assembled, its action remains inert. The real test of any take-down rifle is that it handles and shoots like a full-specification sporter. When you put an Air Arms S510 TDR to your shoulder it feels like you're shooting one of the world's finest sporters – because that's exactly what you're doing.

Full - specification performance - in a take-down format

Specification

- Weight: 2.8kg (6.2lbs)
- Length: 1030mm (40.55")
- Power: S&D: 16J (12ftlb)

S200 Sporter

Accuracy and top performance are the cornerstones of all Air Arms' rifles, and the S200 Sporter Rifle has everything it takes to produce exceptional results at a lower cost. Perfect for juniors, ladies or those of smaller stature, the S200 has a deserved reputation for introducing airgunners to the rewards of top-level shooting. The bolt action S200 offers ambidextrous simplicity, smooth handling and the options of a multi-shot magazine and a dedicated moderator (country dependant), clearly illustrating that great design by Air Arms and production by world leaders Ceska Zbrojovka is the perfect partnership. For absolute proof that truly rewarding performance is available for shooters of all kinds, just do what so many have done before you and shoot an Air Arms S200 Sporter.

The S200 Sporter owner is assured of quality at lower cost. It begins with the strength of design and manufacture and goes right the way through to high performance results at the target. This is a full-blooded sporter and its lightweight and easy-carry characteristics have made it popular with experienced hunters and newcomers alike. The semi-match design stock places the trigger hand in perfect alignment to make best use of the S200's excellent adjustable trigger, and the rifle's match grade barrel ensures that your marksmanship is always rewarded. The S200 Sporter also features a unique, adjustable front scope mounting block which can be moved to accommodate any length of telescopic sight. The addition of the optional multi-shot pellet magazine and moderator (country dependant) turns the S200 Sporter into a stealthy, effective hunting rifle, perfect for stalking, ratting and hide shooting, or any situation where a lightweight, fast handling, compact sporter really earns its keep.

High performance and lower cost in a lightweight format

TX200 MkIII

Those who prefer their air rifles to be self-powered and free of compressed air tanks and charging connectors, also require top quality and that's why so many choose the Air Arms TX200 range. These superbly made underlever rifles have forged their reputation as world beaters within the demands of top level competition in hunting fields around the world. The TX200 powerplant is designed to deliver reliable power and consistency with minimal stress on its internal mechanics and its shooter. This is a refined rifle, which, with correct guidance from you, will match the performance of precharged guns shot for shot. It is also the rifle that won a World Field Target Championship and that's the potential built into every TX200 MkIII leaving the Air Arms workshop.

The smooth, reliable, consistent shooting qualities of the TX200 MkIII are a product of several features working together. These include a balanced mainspring, guides and a piston system which runs on synthetic bearings to reduce friction. Less energy lost to friction means higher efficiency, easier cocking and reduced recoil. These are the qualities of an expertly tuned rifle and the TX200 MkIII comes with these benefits as standard. The Safe-Lok system ensures complete security throughout the loading process and each pellet is manually seated directly in the fully shrouded barrel. Expertly finished, polished and blacked, the MkIII's action sits in an elegant, fully-checked sporter stock, completing this rifle's potent blend of performance and style. The TX200 MkIII is designed for those who want the very best in spring-powered technology, and whether you want to be a world champion field target shooter, or an expert hunter, this rifle will take you anywhere you want to go.

Unsurpassed quality in a spring-powered rifle

Specification

TX200 HC

When Air Arms customers asked for a shorter, carbine version of the TX200, we gave them what they wanted. The result was the TX200 HC – Hunter Carbine, which rapidly became a best-seller. The success of the HC surprised no one, as customers and magazine experts alike praised the handling and build qualities and accuracy of this thoroughbred sporter. The desire for more compact, carbine rifles continues and so does the popularity of the TX200 HC. This popularity continues for exactly the same reasons it began; because shooters appreciate a good-looking rifle that performs to the very highest standards.

One look at the Air Arms TX200 HC reveals a compact, purposeful rifle that retains the streamlined good looks of the TX200 and represents quality of the highest level. Everything that makes the TX200 the best in its class is contained in the carbine-length HC, including those 'factory tuned' internal components, the elegant stock design and of course, that impeccable metalwork. It's all there, ready to produce the performance that took the TX200 to World Championship level. The HC's barrel, shroud and underlever have been shortened and a sure-grip cocking aid has been added to the underlever. Inside the hollow shroud, the baffle system fitted to the entire TX200 range diverts and reduces the HC's muzzle noise, while the match quality Lothar Walther barrel ensures absolute accuracy. Each shot is sent on its way by the HC's computer designed CD trigger unit. Sensitive, adjustable, and totally predictable, this trigger is the final link in the performance chain that keeps the Air Arms TX200 HC right at the top of the best-seller charts.

The Hunter Carbine version of the all-conquering TX200

Specification

- Weight: Starting from 3.8kg (8.4lbs)

Pro Sport

It is a widely held opinion, that no airgun in the world combines the degree of mechanical function and stylish design of the Pro Sport. When you look at the rifle, it's hard to disagree with that opinion and when you shoot the Pro Sport, it's even more so. Here is a rifle that follows classic fullbore sporter lines in an underlever format. From the tip of the shrouded 'bull' barrel, through to the fluted fore end and skip checkered panels of the stock, all the way to the ventilated butt pad, the Pro Sport is a connoisseur's rifle and rightly regarded as the finest production spring-piston airgun ever made.

The pleasure of shooting an Air Arms Pro Sport begins with the admiration of its form and grows through an appreciation of its function. Each of these features is a product of the other and the Pro Sport has truly earned its world class reputation as a thoroughbred sporter. A significant part of that reputation came courtesy of input from one of the most respected air rifle technicians in the business, this being Ken Turner. Ken Turner's genius brought the 'factory-tuned' element to the TX range and into the Pro Sport. It also produced the rifle's unique, flush-fitting underlever, which requires no catch to hold it in place and remains out of sight until required. From Air Arms' own developers came the superb CD trigger system and the luxury stock, plus the wealth of continual development the company invests in every model. The Pro Sport represents the peak of Air Arms spring-powered technology and, many would argue, the very best of its kind.

Supreme styling meets world class function

Specification

- Weight: Starting at 4.1kg (9lbs)
- Length: 1050mm (41.25")
- Power: Std 4.5mm (.177) - 16J (12ftlb)
5.5mm (.22) - 16J (12ftlb)
HP 4.5mm (.177) - 19.4J (14.3ftlb)
5.5mm (.22) - 23.7J (17.4ftlb)
- Recessed aluminium under lever
- Gold plated two stage trigger
- Built-in moderator (where legal)

S200 Target

Target shooting takes many forms and offers unlimited challenges and rewards. From club competition prizes, all the way to Olympic honours, the modern target shooter competes in a world of opportunity and it's essential that beginners enjoy a positive experience. The S200 range was developed by the Air Arms team of designers and is produced by world leading manufacturers, Ceska Zbrojovka. The S200 Target rifle provides everything needed for that positive experience, and at a price far below anything in its performance range. The S200 Target is recoilless, easy to operate, comes with a precision trigger and a fully-adjustable dioptre sighting system. Its weight and balance are perfect for juniors and shooters of lighter build and the uncomplicated design of the stock makes the rifle ideal for 3-positional and conventional paper target competition.

This is an entry level target rifle that performs so far above its price bracket, you won't believe it until you shoot it. The S200 Target's .177 calibre barrel is renowned for its accuracy and with the dioptre sights fitted as standard, the shooter is fully equipped to make the most of its match winning potential. Further aiding the accuracy of the S200 Target, is a supportive, match-type stock and precision trigger, plus the recoilless consistency of the precharged pneumatic action. With its power set at 6 fth the S200 Target produces over 130 shots per charge, which is more than enough for any match, including sighting shots, and the manageable weight and perfect balance of the rifle is designed to promote on-aim stability, without tiring the shooter. Finally, the stock is ambidextrous, so left-handed newcomers can also benefit from the perfect start to competitive shooting provided by this remarkable, top value target rifle.

The ideal introduction to the challenge of target shooting

Specification

- Weight: 2.9kg (6.4lbs)
- Length: 920mm (36.25")
- Ambidextrous beech stock
- Single shot action with 5 or 10 shot conversion kits available as optional extra

MPR10m Sporter

Moving up in the world of target shooting requires match winning accuracy and impeccable handling from your chosen rifle; these qualities, and many more, come as standard with the Air Arms MPR 10m Sporter – the match rifle that grows with your aspirations. Begin your competition shooting with the standard MPR 10m Sporter, which is designed for junior shooters, then, when your ability and body size requires a more adult sized rifle, add the optional barrel chamber extension, stock spacers and fully adjustable match butt pad to take your shooting to the next level. Move up to an MPR 10m Sporter – and it will move up with you.

Using an MPR 10m Sporter is the best start any junior target shooter could have. MPR stands for 'Multi-Positional Rifle', and whether you're shooting from the standing, kneeling, or prone position, the MPR will help you towards higher scores and greater shooting satisfaction. The rifle's ambidextrous stock comes with an adjustable cheekpiece and butt pad for perfect fit and alignment, from which the precision of the supplied dioptre match sights and two-stage, position-adjustable, competition grade trigger can be exploited to the full. Each charge of compressed air provides over 120 full-power shots, and the rifle's air reserves can be instantly monitored via its onboard pressure gauge. With the Sporter's CNC machined internal components protected by a bronze air filter, you can be certain that the rifle's performance won't be affected by contamination from dirt or grit. This striking, recoilless, precharged pneumatic rifle is superbly engineered, flawlessly finished and comes with the potential to take the dedicated junior target shooter all the way to adulthood.

Genuine 10-metre accuracy and more - for less

Specification

- Weight: 3.1kg (6.8lbs)
- Power: 7J (5.15ftlb)
- Shot count: Approx 120 per cylinder
- Single shot bolt operated action
- Adjustable rubber butt pad with optional metal butt hook available

- Multi adjustable match trigger
- External accessory rail
- Optional internal rail
- Dioptre sights with 4 element sizes
- Removable cylinder
- Adjustable cheek piece
- In-line 20 micron filter
- Butt pad spacers to extend length
- Optional barrel and stock weights

For full specification see technical page at the back of the brochure

White Poplar

MPR10m Precision

The MPR 10m Precision is designed to be versatile. As well as being an incredibly effective multi-positional rifle, it can be either the natural successor to the 10m Sporter or the first significant step into competitive target shooting for the novice. In fact, with its ambidextrous, blonde poplar stock, full-length barrel assembly, extended sight base and recoilless, precharged pneumatic action, the Precision is built to take the newcomer, club shooter or bull target shooter to the next level of performance. Every MPR 10m Precision is fitted with competition dioptre sights, a fully-adjustable stock with the option of a true match butt pad, a recoilless action and perfect balance as standard. Whether you move up to it, or begin your competition career with it, this top-value rifle is ready to impress – for less.

Inside the Air Arms 10m Precision everything's in balance. The firing valve is designed to be self-regulating, so as the pressure changes in the rifle's air reservoir, the firing valve adapts its operation to keep the Precision's shots consistent and right on target. The rifle also keeps itself protected from mechanical failure via its on-board air filter, so peace of mind can be added to confidence and consistency, all of which allow the shooter to concentrate purely on hitting the target, and making the most of this rifle's outstanding potential.

The Precision's balance is also fully applied to its exterior components and its muzzle extension chamber extends the rifle's sight base for perfect target acquisition and alignment. Each shot is released by a sensitive, adjustable, position-variable match design trigger unit and the on-board air reserves can be monitored at-a-glance via a hi-viz pressure gauge. All in all, when you need to hit the target, the MPR 10m Precision puts you in a great position.

Adult-sized match shooting in multi-role format

Specification

- Weight: 3.1kg (6.8lbs)
- Power: 7J (5.15ftlb)
- Shot count: Approx 120 per cylinder

White Poplar

MPR Biathlon

Biathlon target shooting requires the competitor to demonstrate dynamic physical ability, followed by calm precision on the firing range. These total opposites must be connected by a rifle that offers speed and precision in a practical, uncomplicated package, that produces perfect accuracy no matter what the conditions. That rifle is the Air Arms MPR Biathlon. Built around the solid MPR foundation of a recoilless, fast-fire, autoloader, sidelever action in an adjustable, match-style stock, the Biathlon is designed to translate every well-aimed shot into a perfect hit. With its requirement for speed and precision, biathlon target shooting demands the best of both worlds – and this is just the rifle to deliver it.

Everything Air Arms has developed for its MPR range, and more, has been invested in the Biathlon. All of the proven features are there, including the self-regulating, consistent action that produces over 120 shots per charge, the match stock with its adjustable cheekpiece and butt pad, and the winning combination of a Lothar Walther competition standard barrel and high quality dioptre sights. But there's more. First, to accommodate the sport's need for speed, the Biathlon is fitted with a fast-cycling, sidelever action, complete with a 'speed bar' handle which can be cycled in a split-second, even when wearing gloves. Then there's the rifle's built-in magazine store, which keeps the Biathlon's four supplied 5-shot pellet magazines secure and immediately to hand within the fore end. The sport of biathlon target shooting may require a combination of opposites, but where the rifle is concerned, quality of design, manufacture and performance will always be the deciding factor. The MPR Biathlon has that factor – and it's the best of the best of both worlds.

Match standard accuracy in an all-action format

Specification

- Weight: 3.3kg (7.2lbs)
- Power: 7J (5.15ftlb)
- Multi shot side lever action
- Adjustable rubber butt pad with optional metal butt hook available
- Multi adjustable match trigger
- Accessory rail

- Shot count: Approx 120 per cylinder
- Four 5 shot magazines supplied
- Dioptre sights with 4 element sizes
- Removable cylinder
- Adjustable cheek piece
- Quick release magazine clip built into the stock
- In-line 20 micron filter

HFT 500

To win a hunter field target competition, you need a rifle which will produce consistent accuracy right out to 50 metres, in all kinds of weather from chilly sub-zero temperatures to the intense heat of midsummer. Add rain, wind and the demands of these changing conditions and you will quickly find that a successful hunter field target air rifle is a specialised piece of equipment.

The Air Arms HFT 500 is a specialised rifle and worthy of winning trophy after trophy in hunter field target competitions. We can say this with confidence because it provides the shooter with everything required to win. All you need to do is provide the talent – and the HFT 500 will do the rest.

When you take an Air Arms HFT 500 into the competition field, you have in your hands the potential to win at every level. This proven rifle runs a consistent, full-power, precharged pneumatic action aligned to a specially commissioned match grade barrel, fitted with an anti-flip muzzle brake for enhanced stability on firing.

The easy-to-use side lever cocking and loading system allows each pellet to be presented to the rifle's breech by the shooter, for fuss-free loading and perfect accuracy.

Hunter field target shooting requires versatility from competitor and rifle alike and the HFT 500's fully-adjustable laminate stock provides optimum stability, balance, fit and control in every shooting stance possible. A precision, position-variable, match trigger fine-tunes the HFT 500's ergonomics, and the multi adjustable rubber butt plate is there to provide optimum contact between shooter and rifle. Incorporating Air Arms successful S510 valving system already means that the HFT 500 has a proven track record, and the potential to win the greatest prizes in the sport. The HFT 500 Field Target rifle has it all. If you want to be ahead of the field – choose an Air Arms HFT 500.

Accuracy, power and control, in a hunter field target format

FTP900

Quite simply, all the Field Target rifle you will ever need

Specification

- Weight: 5kg (11lbs)
- Length: 1040-1070mm (41-42.1")
- Power: 16J (12ftlb)
- Precision, fully regulated, recoilless side lever action
- Competition proven barrel system
- Multi adjustable match stock for perfect fit

Three essential elements have to come together to achieve success in field target shooting. Those elements are performance, precision and control, and you'll find the ultimate versions of all three in the Air Arms FTP 900 Field Target rifle. This is a rifle forged from the success of the company's world-beating EV2 range, purpose built to win at the highest level. With over 25 areas of adjustment available, the FTP 900 will fit you and your shooting style to perfection, while the unrivalled accuracy of its fully-regulated action delivers every shot with pinpoint precision. A full-specification match trigger system, extended scope mounting rail, world-class competition barrel, plus fold-away spirit level and windicator arm, add yet more control and match winning potential, leaving you to be the best you can possibly be. The FTP 900 is the finest Field Target rifle in the world – because it was made to be just that from the start.

At its highest level, field target shooting, be it FT or HFT, demands versatility and total control under all conditions. A winning rifle, therefore, needs to provide the clinical performance and adjustable precision of a match rifle, from the reliability of an all-weather sporter. The demand for versatility comes with the need to take on demanding targets from all angles, and from the sitting, kneeling and standing stances. That means you need a rifle that will not only fit you perfectly, whatever your body type and shooting style, but also one that can be adapted to provide total control at all times. That rifle is the Air Arms FTP 900.

Every component, feature, fixing and contour of the FTP 900 has been developed in full consultation with the best competition shooters in the world, and factored through Air Arms' renowned rolling development programme. The FTP 900 reflects this unparalleled input. It looks like a winner – because that's exactly what it is.

- Shot count: 100
- Full specification, multi adjustable match trigger unit
- Muzzle flip deflector with built-in air stripper
- Fold away spirit level and wind indicator arm
- Fully shrouded barrel with floating option
- Ball joints on cheek piece, fore-end & butt hook for maximum adjustment
- In-line 20 micron filter
- Built-in manometer

Alfa Pistol

Equipment designed for entry-level competition shooters requires every bit as much forethought and expertise as that designed for experts. The newcomer to competition shooting needs a pistol capable of high performance, at reasonable cost, within an uncomplicated, practical format. Combining these features, in conjunction with Alfa Pro, is what led to the development of the Alfa, a pistol that offers everything you need to get you into the challenging, and immensely rewarding, sport of target pistol competition. With its compressed air reservoir housed in the grip, and over 80, recoilless shots from every recharge, the Alfa makes a perfect training pistol or club competition pistol, and if you're ready to take up the target pistol challenge, the ideal introduction is ready and waiting.

The Alfa pistol has more performance features than many airguns twice its size, and twice its cost. Within its recoilless, precharged pneumatic action, a power regulator has been installed to maintain consistency of muzzle energy and because the air reservoir is in the pistol's stippled walnut grip, the Alfa's balance is excellent and assists on-aim stability. Further stability comes from the slots in the pistol's barrel shroud, which form an anti-flip muzzle brake, and the mounting rail at the base of the shroud which accepts the supplied counterweight for perfect balance. The match-type trigger offers multiple position and let-off adjustments, and the Alfa can be 'dry-fired', providing a training facility without needing to discharge pellets. The pistol's competition sights are fully adjustable, and the front post can be rotated to offer your preferred sight picture, making the Alfa a genuine handful of target shooting potential.

A fine introduction to competition pistol shooting

Specification

- Weight: 0.9kg (2lbs)
- Length: 430mm (16.75")
- Ambidextrous grip as standard with RH and LH options
- Dry fire practice facility

right and left hand options

Pellets

Shooters who demand and achieve outstanding results also understand where those results come from. World beating performance is not the result of any single factor, but the successful combination of many. It begins with the selection of equipment capable of the performance you need, and ends with your ability to use that equipment to its full potential. Between the precision of the hardware and the skill of the shooter lies a single, essential means of translating potential into success – and that's the pellet. It's the pellet you shoot that ultimately determines whether you hit the target, or not. Once that pellet leaves the barrel, you have to trust it to deliver everything invested in your shooting system. That's everything, from the technology, care and craftsmanship invested in the development of every component in your airgun, through more of the same devoted to your sight and mounts, to the hours of dedication required to make you an efficient shooter. All of it rides on the head of that pellet, every time you fire a shot. Expert airgunners understand this fundamental fact of shooting life, as much as they know the folly of creating any other weak link in the performance chain. The best always use the best, especially when it comes to pellets.

We at Air Arms research everything. Each component, product and accessory that carries our name has earned its place by being the best at doing what it's designed to do. That applies to Air Arms pellets; not just because that's the way we do things here, but because we know that our pellets are responsible for the delivery of the Air Arms performance promise. Our pellets are exclusively designed by the renowned manufacturers JSB and have to be top quality, because they prove how good our airguns are.

All Air Arms pellets are precision formed for ultimate consistency and accuracy you can trust. Hunters, field target shooters and airgunners who appreciate quality will see for themselves why our pellets produce such outstanding results. These pellets reflect the Air Arms philosophy of precision, top performance and full potential – and that's why so many of the world's best shooters choose them. By becoming an Air Arms customer, you share our commitment to quality and our vow to produce the best possible performance. Please maintain that commitment by choosing the finest possible pellets for your airgun – made to our standards, for your success.

Accessories

Our shooting needs are unique to us; it's part of what makes us individuals. Tailoring your shooting gear to fit you, and the type of shooting you do, increases your effectiveness and that leads to greater satisfaction and more pleasure from your sport. Accessories are important, and we take them seriously. Every accessory we produce has been asked for by our customers and giving our customers what they want is the foundation of the company. The range is extensive and growing all the time, as you tell us what you need and we provide the best possible products to suit you. Air Arms accessories can personalise your shooting in the most productive way, because so many of them are made specifically for your airgun. You decide which accessories will add something to the way you shoot, and you can add more as your needs arise. Accessories help you and your shooting adapt to changing situations, new shooting disciplines and techniques, and they bring you closer to your full potential. Air Arms accessories really can complete your shooting.

Performance upgrades, chosen by you

Choosing your accessories comes down to two things; practicality and pleasure, which are equally valid because they matter to you and your sport and at Air Arms we cater fully for both. Ultimately, quality accessories will always increase the shooter's enjoyment, which arrives from a wide range of directions. If you need more shots for an extensive day in the field or during competition, perhaps a spare air reservoir for your S200 series rifle would take care of it, or maybe you need a hi-tech air pump which can re-charge any precharged pneumatic. As always, the choice is yours. Those who know the value of dedicated practice on targets that reproduce the demands of hunting or competition, will find exactly what they need to hone their skills, on targets that will last a lifetime, because that's how we build them. Those who, wisely, seek the ultimate in gunfit and control will consider our range of match sights, stock spacers, rests, bipods and fully-adjustable butt pads, while those who want to shoot as silently as possible will choose one of our renowned moderators. Some shooters simply want more shots immediately to hand, and having spare magazines fills this need in seconds. Others prefer to maintain their Air Arms spring-powered rifles themselves, and we've got the perfect springs, seals and lubricants for the job. Air Arms customers also told us they'd like to wear our brand, and we are proud to provide the clothing to let them do that.

Our company, our airguns and our accessories are designed and built around our customers, and what they want from their shooting. Our customers want performance, results and the satisfaction that comes from using the best products in the world. We build those essentials into everything we do – and our accessories make it personal.

Thank you to...

Air Arms would like to thank the following companies for their invaluable assistance in producing this brochure, which, like the products it contains, is the result of a great team effort.

Hawke Optics is proud to be associated with AirArms, the shared history, connections and values make this a natural partnership. Hawke Optics was established in the UK over 15 years ago. Today Hawke is a worldwide market leader, offering an extensive range of high quality, value for money sporting optics and accessories, including a range of specially designed air rifle scopes.

Seeland is proud to have been of assistance to Air Arms, a proven company like itself specialising in shooting products that are fit for purpose. Seeland has a reputation for combining performance with value for money. Designed by experts for experts, its comprehensive range meets the needs of the dedicated sportsman whatever the conditions.

Harkila is proud to be associated with Air Arms, a market leader like itself that takes great pride and care in the design of its products. Renowned for its award winning, technically advanced country sports clothing, Harkila guarantees high performance and comfort whatever the weather or conditions.

The people and companies who helped us put this brochure together

The Lord Roberts Centre at Bisley opened its doors and its ranges to us, and the excellent N.S.R.A. shop facility within the Centre allowed us to use whichever products we needed to get the shot required. That's exactly what it does for its customers too, and it's easy to see why business is booming at Bisley.

Still at the Bisley Ranges, but moving outdoors this time, a huge 'thanks' to the good people at the Bisley Field Target Organisation for letting us use their extensive facilities. The BFTO is one of the biggest, and best, airgun clubs in the country.

In addition to the organisations and companies that helped us, we would like to offer our sincere gratitude to some truly wonderful individuals. So take a bow the Air Arms Ambassadors; Eddie Jones, Ian Harford, Paul Hodson, Jack Harris and Justin Wood. We would also like to thank Fern LeCheminant, Lyn Roberts, Mark Bonham, Sam Bromley, Katy Paton, Mandy Pankhurst, Jemma Bromley, Robin Brown, 'Fuzz', Callum Lamb, Mark Camoccio and Terry Doe. Thanks also to the Army Cadet Force, and all the guys and girls from Air Arms, as well as the boys and girls at the BFTO.
